

**RiveStop**  
System

**RivePipe**

## THE FIRST CONETUBE OR SPACER THAT MEETS THE 3R OF SUSTAINABILITY: REDUCE, REUSE, RECYCLE

RivePipe is an innovative solution for formwork estructures, specially designed to protect tie bars when these are inserted to form the wall. RivePipe is also designed with the purpose of creating a clean and empty concrete wall bushing. By removing the RivePipe, the risk of leakage between the joint of a conventional PVC pipe (which normally remains inside) and the concrete is reduced dramatically.

RivePipe can be reused for the next formworks, being reusable, and recyclable.

## USING THE RIGHT TOOL

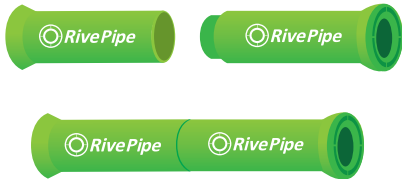

RiveOut is the extracting tool used to remove the RivePipe easily, effortlessly and rapidly leaving a clean, smooth and empty tie hole in the wall. The extraction process is easy and fast (in a matter of seconds), with no damage to the wall.

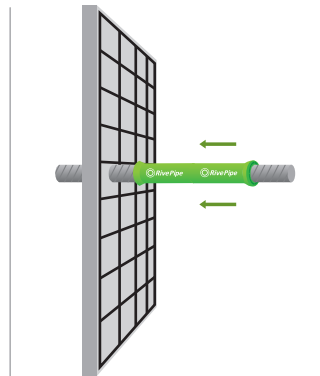

RiveOut can be used for all of your future projects with RivePipe

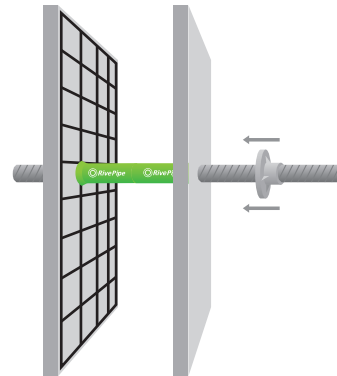

## HOW DOES IT WORK?

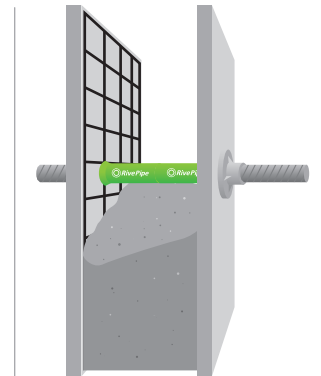

STEP 1: RivePipe is made up of two detachable pieces joined together; 1 Rivepipe male and 1 RivePipe female.

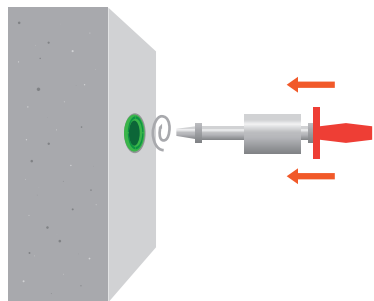

STEP 2: RivePipe protects the tie bars when these are inserted between the formwork panels.

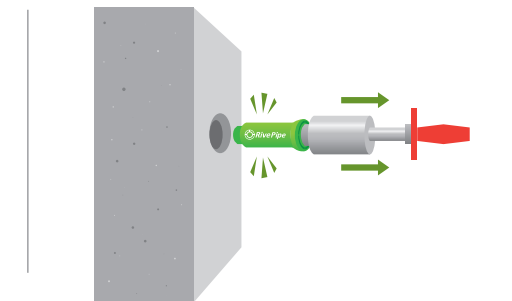

STEP 3: RivePipe is used in most of the formwork systems with anchor ties.

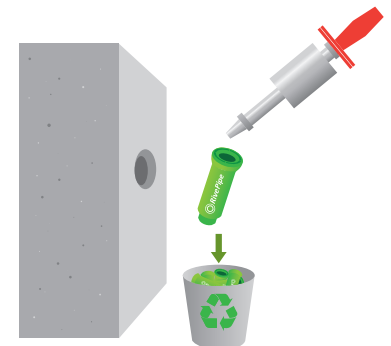

STEP 4: adaptable to different wall thicknesses.

STEP 5: insert the RiveOut into the RivePipe, on the surface of the wall.

STEP 6: extract the RivePipe on both sides of the wall by using the RiveOut.

STEP 7: keep both pieces of RivePipe in order to be used again.

# WHY SHOULD WE USE RIVEPIPE?

*“The solution that allows you to remove the PVC tubes and reuse them”*

## RELIABLE WATERPROOFING

Water leaks prevention

## REUSABLE

Reduction of materials and costs savings

## EASY TO REMOVE

Simple: anyone can do it

## QUICK EXTRACTION

In a matter of seconds by using the RiveOut

## ADAPTABLE

To different wall thicknesses

## ECO-FRIENDLY

Reduce, reuse and recycle

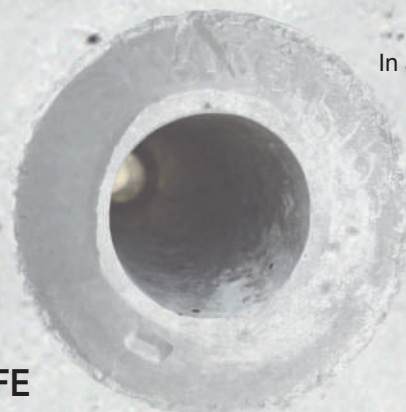

## RELIABLE AND SAFE

Reducing the risks caused by leaving PVC pipes into the concrete structure.

## SIMPLE AND CLEAN

Clean, smooth and empty tie holes with no damage to the wall.

## FINAL RESULT AND SEAL

The result is a clean hole, homogenous, ready for a hermetic seal with RiveStop (a product manufactured by JABE). The perfect product for a green construction or sustainable buildings. **A comprehensive solution consisting of RiveStop and RivePipe together for 100% waterproofing.**

## INNOVATIVE AND ENVIRONMENTALLY FRIENDLY PRODUCT

This solution meets the 3R's of sustainability; REDUCE, REUSE AND RECYCLE

With these products specially designed for formworking systems, JABE promotes waste prevention and the reuse and recycling of materials in an effort to contribute to the sustainable development of the construction industry. JABE is committed to the circular economy.
